MICROGREENS

has specially selected seeds for the production of microgreens. With 38 years' experience in seed production and distribution, we offer you this wide range of varieties, rigorously tested and selected for maximum quality. Whether it's peas, dill, sorrel or radishes, we've selected the best and adapted our packaging to help you produce the most beautiful little shoots! In these pages, you can discover an innovative range of products that we will be able to offer you in 2024.

VOLTZ MARAÎCHAGE

THE MICROGREENS RANGE

Organic seeds certified by ECOCERT FR-BIO-01

Non-organic seeds are untreated

Samples are available for each variety just ask your sales representative!

Quality at the heart of our commitment

The quality and traceability of our seeds are at the heart of our work. We have selected seeds specifically for growing microgreens and have subjected them to bacteriological analysis.

We stress that the seeds we sell are intended for the production of micro-pods and are absolutely unfit for human consumption.

Our suppliers are rigorously selected according to their ability to meet GRAINES VOLTZ quality requirements.

They send us their results guaranteeing the absence of food pathogens (*Escherichia coli*, *Listeria monocytogenes*, *Salmonella spp*) as well as germination and specific purity results. GRAINES VOLTZ's quality department carries out additional internal checks in its laboratory, as well as sanitary analyses in an accredited external laboratory.

Our seeds are received and packaged on our premises in such a way as to avoid any risk of internal contamination, in accordance with our micro-pod management procedure.

The results of the analyses are then checked to validate the conformity of the seed lot and its release for sale. A control sample of each batch of seed is also kept on our site.

Our microgreens seeds are packaged at a dedicated workstation in hermetically sealed packaging. The seeds are stored under controlled temperature and humidity conditions. Finally, our secure barcode scanning system guarantees total traceability of our products from receipt to delivery.
